

Signal™ Instrument Transport Bags

Protect staff, patients, and visitors from biohazard risks.

Place a high-level disinfected instrument into the Signal Instrument Transport Bag and seal the bag using the low-tack resealable closure. Use the pre-applied HLD label to record the date that the package was prepared, and the preparer's name. Once the procedure is over, and the instrument is to be returned to decontamination, remove the HLD label to expose the biohazard legend. Place the soiled instrument back in the bag and re-seal the closure.

Close-up of the HLD Label

Instrument Transport Bag with Removable HLD Label

- Easy to remove even while wearing gloves.
- The low-tack adhesive won't leave residue behind.
- Biohazard legend printed on the bag.
